RE: Proposed Wind Farm Project by Epuron at the Saint Patricks Plains Site  
Tasmania Australia.

Dear Sir /Madam

it has been brought to our attention that a proposal for an alternate energy wind farm to be built on the area known as St Patricks Plains Tasmanian Australia.

After reviewing the material presented as to its development we would like to officially lodge an objection to this project

The area of Saint Patricks Plains and in particular the lagoon known as Penstock lagoon is known as the "Jewel of the Tasmanian highlands" and known worldwide to anglers and people who value the peace and ambiance for generations this area has to offer.

Indeed, the Tasmanian Government advertise Tasmanian as the Wild brown trout Capitol of the world and use this slogan to attract tourist from around the world to its shores.

Whilst we are in favour of alternative energy projects they should be if possible installed in areas less visibly significant than the Saint Patricks Plains project.

We therefore urge you to consider our objection to this project when the application is lodge for your attention."

A handwritten signature in black ink that reads "Allen Adinoff MD".
